New Vision New Life™

Customised Advanced Surface Ablation Lasik (ASA)

An Alternative Lasik

WHAT IS LASIK?

Lasik simply means using a laser to change the shape of the cornea.

It is a procedure to restore your distance vision by correcting your short-sightedness, long-sightedness and astigmatism. This is achieved by reshaping your cornea using a cool Excimer laser.

How long does the procedure take? Is it safe?

Laser procedures usually take our highly experienced surgeons less than 30 minutes to complete. Excimer lasers will not produce heat nor penetrate the corneal surface. Thus, Lasik by itself is safe.**

Why should I opt for Lasik?

- **Convenient:** Eliminates the need for cumbersome glasses and to stock up on contact lenses or spare glasses.
- **Long-term cost saving:** No more replacing or repairing eye wear.
- **Security:** Eyesight remains dependable in emergency situations.
- **Sports:** Enjoy your favourite games and activities with no inconvenience.
- **Self-confidence:** Look better and feel better naturally.
- **Career:** Occupational flexibility in fields such as military, aviation, engineering etc.
- **Travelling:** No glasses or lenses means one less hassle for vacations.

Customised Advanced Surface Ablation Lasik (ASA)

Customised ASA is an alternative Lasik to correct short-sightedness, long-sightedness and astigmatism. This specific type of Lasik procedure will only be recommended if necessary.

Lasik procedure normally involves corneal flap creation where the corneal protective flap is gently lifted, so that the customised Excimer laser can fall on the inner corneal tissues (stromal).

Advanced Surface Ablation

Corneal surface preparation

Combined with (+)

Customised Excimer Laser

Technology to change power

In ASA Lasik, the corneal flap creation is no longer required. Only the top layer of cornea (epithelium) will be removed, before Excimer laser is applied.

The visual and corneal recovery period may take a little longer than other Lasik procedures, but the outcome is similar to that of normal Lasik.

ASA Procedure

Instead of cutting a flap on the front of the cornea, the corneal skin cells (epithelium) are loosened and removed. The corneal surface is then treated with the Excimer laser and covered with a bandage contact lens.

Welcome to
New Vision New Life

Advantages

Customised ASA is recommend for those with...

- Dry eye
- Glaucoma
- Wide pupils
- Corneal dystrophy
- Higher risk of eye injury
- Insufficient corneal thickness

Make an appointment with us to find out whether you are a candidate for ASA Lasik! We are always ready to deliver a new vision, a new life. Contact us at **1800-88-1201** or email us at **hq@optimax.com.my**

WHY CHOOSE OPTIMAX

Experience

Since 1995, we are among the professionals to perform Lasik in Malaysia. Today, we boast over 95,000 satisfied clients.

Modern Technology

From diagnosis equipment to sophisticated laser engineering, modern technologies are used.

Total Convenience

With a comprehensive network covering most cities in Malaysia, customers can keep in touch with us more easily.

ISO Certified

We are a corporation in Malaysia providing world-class Lasik services that fulfil stringent ISO requirements.

Trusted Team of Professionals

We are occupied with a resident multi-specialty Ophthalmologist, practicing Optometrist, Vision Consultant, Nurses and Laser Engineer.

Life Time Warranty

Our Vision For Life program warrants your Lasik vision for a lifetime.*

HPMRS

All our Lasik procedures achieved results of 99% in functional visual acuity and 100% in safety tests audited by the Healthcare Performance Measurement Report System (HPMRS).**
