ReLEx smile

Less is More

ReLEx smile

ReLEx smile is the new and revolutionary laser refractive technique for correction of vision defects. It is a minimally invasive treatment with numerous innovative benefits, high precision levels and perceptibly greater comfort during the treatment itself.

How long does the procedure take? Is it safe?

ReLEx smile usually takes our highly experienced surgeon 10-15 minutes to complete. It is safer than other laser vision correction treatments since it does not require the opening of the corneal flap.

How laser vision corrections benefit me?

- **Convenient:** Eliminates the need for cumbersome glasses and to stock up on contact lenses or spare glasses.
- **Long-term cost saving:** No more replacing or repairing eye wear.
- **Security:** Eyesight remains dependable in emergency situations
- **Sports:** Enjoy your favourite games and activities with no inconvenience.
- **Self-confidence:** Look better and feel better naturally.
- **Career:** Occupational flexibility in fields such as military, aviation, engineering etc.
 - **Travelling:** No glasses or lenses means one less hassle for vacations.

ReLEx smile: Minimally invasive and flapless

ReLEx smile is a less invasive way to treat short-sightedness and astigmatism.

Traditional laser treatment involves cutting a flap from the cornea and uses Excimer laser to change the shape of the cornea. With ReLEx smile, there is no flap cut required.

A 4mm opening is all ReLEx smile needs. The minimally invasive technique allows significantly more corneal tissue to remain intact. This contributes to many benefits which other Lasik procedures do not offer.

Bladeless. Flapless. Painless.

Procedure

Step 1 **Eye Examination**
Spend time with our optometrist to confirm suitability

Step 2 **Meet your consultant**
Talk to our friendly consultant

Step 3 **Femtosecond Laser applied on corneal**

Step 4 **Thin layer of corneal tissue removed through small pocket**

Step 5 **Welcome to New Vision New Life**

Advantages

Patient comfort

- Entire procedure is completed in a single treatment step
- No device change during the procedure
- Takes only few minutes to complete
- No temporary loss of vision during treatment
- Noise and odor free

Safety

- Minimally invasive procedure that reduces 80% of side cut
- Almost complete preservation of protective corneal layer
- Corneal biomechanical strength remains highest

Outcome

- Preservation of corneal nerves to prevent dry eye
- No flap complication
- Outstanding predictability of result even for severe shortsightedness and astigmatism
- High definition vision quality
- Reduced post treatment glare and halos
